PassKeeper

by [Brad Greenlee](#)

PassKeeper is a Windows utility that allows you to keep a list of accounts with usernames, passwords, and notes. This list is stored encrypted.

I developed PassKeeper in order to keep track of the many different "accounts" I have across the Net. Many services on the Web, for example, require you to register and give out a username and password, which you are often allowed to pick out yourself, but not always. Examples of such services include [HotWired](#), [Pathfinder](#), and [Amazon.com](#). Of course, PassKeeper can be used to safely keep a record of anything, really.

PassKeeper is free for individual and non-profit use. Corporations and generous individuals are encouraged to make a \$10/copy donation. You can do this now via [PayPal](#).

Welcome to PassKeeper

Welcome to PassKeeper!

Before you can start using PassKeeper, you need to create a master password. This password not only allows you to access the PassKeeper program, but is the key to unlocking your encrypted PassKeeper data.

DO NOT FORGET THIS PASSWORD! If you do, your PassKeeper data will be undecipherable.

In the boxes below, please enter your password. As a security precaution, you will see asterisks (*) instead of the characters you type. You need to enter it twice to make sure you don't mistype it.

Thank you for using PassKeeper!
